Weekly Individual Report Unit 3 Week 8

Austin Hall

UFID: 90207943

Time Dedicated to the Project

I spent 8 hours working on the project. I dedicated an entire day to working on the front end. I will probably spend another 2-4 hours working on it over the weekend, but I will be busy on Thursday and Friday so I'm Wednesday.

Contribution to Project Development Process

This week I spent time tying all of the pages that I have created together by creating the rough draft of the user account page. The user account page is where the user will be able to use the majority of the functionality of the website. I created another component in the card.tsx file that allows the most recent sessions to be displayed so they can be viewed or shared. I tied the CreateSession page to a button on the user home page so the user can enter information about the session to be stored by the back end. As a quality of life change, I made the logo clickable so we could go back to the homepage without restarting the program.

Demonstration of Applied Knowledge

This week I spent a lot of time searching the internet for how to implement the different components used to flesh out the webpage. I am still using the wireframes I created to guide me during implementation.

Reflection

We are gearing up to begin the work on the meat of the project which is the actual syncing algorithm. I need to create a media viewer page before that is done, but I am excited and a little nervous to get to this part. It has been a decent amount of work getting all these pages created, but it wasn't super difficult. The sync algorithm will be much more challenging so I'm preparing myself to actually get our hands dirty and start using these pages for the reason they were created.
