Weekly Individual Report Unit 4 Week 11

Austin Hall

UFID: 90207943

Time Dedicated to the Project

I spent about 8 hours on the project this week. I plan to spend another 3-5 hours on the project over the weekend. Coming off of spring break, I was working on future career opportunities and training.

Contribution to Project Development Process

This week I spent most of my time working on the form and structure of the video player aspect of our project. I created a new page where the video will play and a selection bar below the main player where thumbnails for the different angles will appear. The main video player works and will correctly play a video within the window, but the thumbnails do not show up, they are currently just placeholders for the thumbnail.

Demonstration of Applied Knowledge

This week's research and knowledge involved getting the video to play, but most of the research has not been utilized yet. Getting the first video to play was fairly simple, but getting thumbnails from the other angles is proving to be more complicated than I thought. There is a built-in feature that plays the video, but thumbnails will require using a different library which is what I will be working on the rest of this week.

Reflection

I feel more confident about moving into the synchronization algorithm now that I have a simple video player. I have some ideas to share with the group for how to handle the synching that I think may be helpful, but this library I will be researching could be helpful in that regard so my ideas may be irrelevant for the final project.
